Submission Worksheet

Course: IT114-005-F2024
Assigment: [IT114] Module 1 Getting Started
Student: Keven H. (kh465)

Submissions:

Submission Selection

1 Submission [submitted] 9/11/2024 7:57:37 PM

Instructions

^ COLLAPSE ^

Overview Video: https://youtu.be/LQwyAhmNzoQ

1. Create a repository on github, use the format `ucid-course-section` as the repository name.
2. Make sure it's set to private
3. Go to Settings -> Manage Access -> Invite Collaborator -> Search for my ID **MattToegel** and send an invite; if your section has a grader do the same for their github username (refer to course announcements)
   1. **Note**: Once in a while the invite doesn't get created correctly and you'll need to resend it, keep an eye on the acceptance of the invite since this is required for further HW validations. A comment will be left on Canvas for the submission if the invite is missing at the time of grading).
4. From the terminal / command line create a new branch called **M1-GettingStarted**
5. Create a README.md file and add it to the branch
6. Fill in some basic details:
   1. Course/Section
   2. Your name (first is fine)
   3. Brief info about yourself you'd like to share
7. Hint after creating the file
   1. `git add README.md`
   2. `git commit -m "my readme file"`
   3. `git push origin M1-GettingStarted`
   4. Create a pull request from this branch (via github.com)
   5. Don't merge/close the pull request yet
8. Fill in the below deliverables.
9. Once finished, ensure it's saved and click the "Export" button.

10. Move the generated PDF into your local repository folder at any location of your choosing.
11. Do the following commands
    1. `git add .` (this will add all changes)
    2. `git commit -m "adding output file"`
    3. `git push origin M1-GettingStarted`
12. Go back to github and merge the pull request that was opened
13. Go to Canvas and upload the same PDF that you just downloaded and pushed to GitHub

Note: Having the submission saved and active keeps it eligible for grading.

ℹ Details:

Should be at least a few sentences for full credit

≡ Task Response Prompt

Response:

I learned how to properly install and enable extensions for Visual Studio. I also learned how to change the path used by VSCode for Java, I had an older version and needed to upgrade/tell Windows to prioritise the newest JDK. Lastly, I learned slightly more about git, but there is still a lot for me to learn to say I am comfortable with using it.

≡ Task Response Prompt

Response:

No major issues, my Java installation was not the recommended version so I had to upgrade and point Windows to the correct path. I also had to change my global identity on Git Bash, I properly did it on my MacBook but did not do it correctly on my PC. Luckily, the error told me exactly what went wrong and how to fix it.
